

Jonathan Low

Chief Technology Officer Candidate — AI Tooling · Production Engineering · Lean SaaS Operations

[Location] · openarmsconsult2026@gmail.com · openarmsconsult.com · github.com/openarmsconsult2026-stack

EXECUTIVE SUMMARY

Hands-on technology leader who builds at the intersection of AI tooling and production engineering. I design and ship AI-driven creative pipelines (video, image, copy) end to end, and — just as importantly — the infrastructure, security posture, and operational discipline that make them ship safely. My operating philosophy is **minimum viable infrastructure**: proving that a "one-operator SaaS" can run reliably with lean systems, ruthless automation, and clear engineering standards. I bring the rare combination a CTO role demands: the ability to write the code, architect the platform, and set the technical strategy.

CORE COMPETENCIES

TECHNICAL LEADERSHIP

- Technology strategy & roadmapping
- Build-vs-buy and vendor decisions
- Security-first engineering culture
- Lean operations with minimal headcount
- Product ownership, concept → shipped

ENGINEERING

- TypeScript across the full stack
- Python tooling & CLI development
- Full-stack web architecture & deployment
- Cross-platform mobile development
- CI/CD, Git workflows, developer tooling

AI / ML

- Anthropic Claude API integration
- Agent-based / agentic workflow design
- Production AI creative pipelines: video, image, copy
- Prompt engineering & LLM orchestration
- Evaluating & productionizing emerging AI tooling

SELECTED PROJECTS & PORTFOLIO

PostPilot (*private*) — AI-assisted content/publishing tool; flagship of the AI creative-tooling work.

Zara Content Engine (*private*) — automated content-generation pipeline built on LLM workflows.

Spray Scout (*private*) — product with dedicated marketing/promo web presence, taken from build through go-to-market.

I Choose You (*public*) — cross-platform mobile application.

Project Manager (*public*) — full-stack web application.

CRM CLI (*public*) — Python command-line CRM tooling.

Client web delivery — production websites and landing pages for small businesses (Times Square Barbershop, Philly's on the Hill, PCS Build, Money Mike ad campaign): repeatable, low-overhead delivery.

Open Arms Consulting website — company web presence, designed, built, and operated solo.

Every public repository ships with a **SECURITY.md** and a defined disclosure process — security as a default, not an afterthought.

SELECTED CLIENT ENGAGEMENTS

Zara Injury Law — Retainer Compliance Audit

2026

Personal-injury law firm operating in five states (NC, CO, WI, FL, AZ).

- Built a contract-audit pipeline against the Vinesign (Filevine) e-signature API and scanned **2,786 signed retainer agreements** — the firm's entire archive — flagging and severity-tagging every defect.
- Uncovered a **99.6% defect rate** in pre-suit fee terms and traced the root cause to the firm's retainer template, so a single template revision corrects ~99% of all future signings.
- Segmented remediation into two tracks: 852 contracts requiring direct client outreach and 1,922 fixable via standard addenda — converting a legal-risk discovery into an executable plan.
- Delivered a complete operational kit, not just data: one-page executive summary, CRM-importable outreach tracker, a 216-page paralegal action workbook, and 852 per-account call files.
- Scoped, sold, and delivered as a fixed-fee engagement, including SOW and vendor-API discovery (worked directly with Filevine support to obtain undocumented API access).

Cars & Claims — BHPH Auto-Financing Customer Platform

2026

Customer portal and payments hub for a buy-here-pay-here auto dealership.

- Migrated the production app off a no-code prototype (Lovable) onto a durable stack — **Vercel + Supabase (Postgres)** with custom domain/DNS cutover — including live customer-data migration with zero user-facing disruption.
- Ran a full **bug-fix and security-hardening pass** before relaunch.
- Diagnosed customer SMS silently failing for months — carriers were blocking every message under A2P 10DLC rules while the app reported "sent" — then implemented STOP/HELP compliance, built an admin SMS delivery-log dashboard for verification, and walked the owner through Twilio brand/campaign registration.
- Integrated Google AI API features; delivered all of it to a non-technical solo owner, with every handoff written so the client could execute it themselves.

PROFESSIONAL EXPERIENCE

Founder & Principal Technologist — Open Arms Consulting

[Start year] – Present

- Own the entire technology function: architecture, development, deployment, security, and vendor selection — the full CTO scope, exercised daily.
- Built and operate a portfolio of AI creative-tooling products (video, image, and copy pipelines) on the Anthropic Claude API with agent-based workflows.
- Standardized on TypeScript across the stack to maximize velocity and maintainability as a lean team.
- Delivered client-facing web products end to end: requirements, build, launch, and ongoing operation.
- Established engineering standards — security policies, repeatable deployment patterns, and documentation — sized for small-team execution without enterprise overhead.

[Previous Role — Title, Company]

[Start year] – [End year]

- [Achievement with scope/scale — team size, budget, or revenue impact]
- [Achievement showing technical depth or platform decision]
- [Achievement showing cross-functional or executive collaboration]

TECHNICAL STACK

Languages: TypeScript/JavaScript, Python

AI/LLM: Anthropic Claude API, agentic/agent-based workflows, generative pipelines for video, image, and copy, Google AI API

Web & Cloud: Full-stack TypeScript (Node.js back ends, modern front-end frameworks), Vercel, Supabase (Postgres), DNS/domain management

Integrations: Twilio (SMS/A2P 10DLC compliance), Filevine/Vinesign e-signature API, third-party REST APIs

Mobile: Cross-platform mobile development

Practices: Git/GitHub workflows, CI/CD, security hardening & responsible disclosure, compliance-driven auditing, minimum-viable-infrastructure operations

EDUCATION

Bachelor's Degree, Marketing — Kennesaw State University (2011–2015)

WHY ME AS CTO

- 1 **I ship.** Sixteen repositories of real, delivered software — products, tools, and client work — not slideware.
- 2 **I think in trade-offs.** "Minimum viable infrastructure" is a strategic stance: every system justified by the value it delivers, not resume-driven architecture.
- 3 **I take security seriously by default.** Disclosure policies on every public project reflect a culture I'd instill in any team I lead.
- 4 **I'm ahead of the AI curve.** Deep, practical experience productionizing LLM and agent workflows — the capability every board is asking its CTO about right now.
